Combining robust, reliable and durable aluminium components in a system that has a vast catalogue of options opens new creative opportunities. You may wish to standardise colours and glazed panels to reflect a corporate style or go for a more exciting mix of colour and glazed panels.

Flexible Layout

The Dock Solutions Transparent Sectional Overhead Door is constructed from aluminium frames. Within these frames, one or more types of panel can be fitted in accordance with your wishes. Next to each other the frames form a section. The sections together form the structure of the overhead door and determine its appearance. The layout of the structure is designed for each door individually. The number of frames and sections can therefore differ per door, as can the format of both. This provides you with the optimum creative freedom and the Panoramic overhead doors are suitable for the widest range of architectural designs.

Individual Styling

To give your overhead door an individual style, you can combine a wide range of transparent and blank panels. An endless number of combinations are possible. The sections of the Panoramic are as standard made of anodised aluminium.

Powder Coating

If the sections will be supplied in a colour, then the profiles will receive a high-quality coloured powder coating. This single layer powder coating guarantees high-quality colour, gloss, hardness, durability, adhesion and coating thickness.

Durable

Panoramic overhead doors are even more durable thanks to the use of high-quality materials. By using transparent fillings in the design, the overhead door allows the maximum amount of light to enter the building. It gives the overhead door an attractive appearance and makes it extremely suitable for use where appearance is important such as in showrooms, fire-stations and ambulance-stations. In addition, the transparent fillings increase the amount of light that enters the building. As a result, additional artificial light is often unnecessary. This guarantees important savings.

Blank Steel Bottom Section

The use of transparent panels gives an overhead door a certain elegance, but in practice, the bottom section of the door often gets more dirty and is more likely to get damaged. Therefore, for practical considerations, many companies choose a combination with a single matching blank steel bottom section. The appearance of the steel bottom section is of course adapted to the style of the entire door.

Wicket Door

Dock Solutions Transparent Sectional Overhead doors can, if required, be fitted with a wicket door. You can choose between a standard sill and a low sill. The overhead door can be supplied as a manually operated door, with a chain hoist or electrically operated.

Finger Protection as Standard

All our overhead doors are CE approved, and are safe to use. Panoramic Sectional Overhead Doors are supplied as standard with finger protection. The finger protection prevents the fingers getting caught between the panels when shutting the door. Finger protection is not obligatory (CE standard) for overhead doors higher than 2.50 metres (the height of the pivot point of the top section). However, we have consciously chosen to equip all our doors with finger protection.
